ACTION AREA 2

FOSTERING CROSS-SECTOR COLLABORATION TO IMPROVE WELL-BEING

This Action Area places new focus on collaborations that include sectors typically viewed as "outside" of health care, and demonstrates how these cross-sector collaborations can play an essential role in building a Culture of Health.

DRIVERS	MEASURES
ENUMERATION AND QUALITY OF PARTNERSHIPS	**Local health department collaboration** Percentage of local health departments that collaborated with community organizations in at least four public health program areas in the past year[8]
	Opportunities to improve health for youth at schools Annual number of school-based health centers that provide primary care[9]
	Business support for workplace health promotion and Culture of Health Index of employer health promotion and practices (by size of business)[10]

Child Health and Education Mapping Tool

The sliding circle is automatically set to the national average for each variable. You can click and drag on the sliding circle (or use the arrow keys) to color in only those areas that have a rate at or above the setting you choose on the slider. The two vertical lines on either side of the sliding circle provide the range for the indicator in the state. Hover over the information ("i") button next to each indicator for more information about its definition and data source.

The "High Needs Area Identifier" shows how many geographies exceed the national average for each number of selected indicators. Clicking on the bar for each number allows users to see only counties matching the selection.

To begin using the tool, select a state of interest or the entire country to view health, education and socioeconomic status indicators at the county level within a region.

New York

Restore All
